

VORTEX®

www.rimexmetals.com.au

Vortex is a non-directional polish, which enhances the softer qualities of stainless steel in architectural design through a diffusing effect on the materials surface. Vortex is a very smooth finish making it ideal for external or internal cladding.

Coloured Vortex® is also available on a made-to-order basis

VORTEX® is a multi-directional polish

Vortex® has a defusing effect on reflectivity thus making it an ideal cladding medium.

Vortex® can also be combined with patterns from the Rimex range, as an alternative to the traditional base finishes used for patterning.

The Scratch Pattern in the finish effectively disguises scratches and other marks.

VORTEX® finish is also available in Coloured Stainless Steel
